

Continuous cerebrospinal fluid (cCSF) sampling via an indwelling spinal catheter in Clinical Pharmacology Studies

Prof. Anthony Absalom, MD PhD, Professor of Anesthesiology,
University Medical Center Groningen, Netherlands

Izaak Den Daas, PhD, Director of Patient Studies at QPS Netherlands

Overview:

QPS and the Department of Anaesthesiology of the University Medical Center Groningen (UMCG) have executed more than 20 studies with CSF Sampling. In this webinar, we will share the details on how to execute CSF Sampling and the pros and cons of cCSF Sampling over single Lumbar Puncture. We will discuss the safety and tolerability of cCSF Sampling procedures. In a few case studies we will share the results and show the value of this technique.

Key Learning Objectives:

Learn about the technology used for cCSF, as well as the potential pitfalls when using this technique.

Learn the critical factors of cCSF by indwelling catheterization, based on the extensive experience of a Board-certified anaesthesiologist who regularly performs this procedure.

Learn about the most common side effects of cCSF procedures.

Understand the various uses of cCSF in early phase clinical research.

QPS has CLIA-certified and GLP-compliant laboratories ready to fast-track your novel coronavirus and COVID-19 RT-qPCR/QPCR and Serological Assays and vaccine development programs. Since 1995, QPS has provided discovery, preclinical, and clinical drug development services. An award-winning leader focused on bioanalytics and clinical trials, QPS is known for proven quality standards, technical expertise, a flexible approach to research, client satisfaction, and turnkey laboratories and facilities. For more information, visit www.qps.com or email info@qps.com.
